

SAM/ITAM Program Jump Start

Advance your SAM/ITAM Maturity through the
ITAMOrg SAM/ITAM Program Jump Start Service

SAM/ITAM Maturity

You're probably already aware of the risks associated with software non-compliance and unclear processes to support ongoing software license compliance. Mature organizations are not only able to demonstrate software license compliance on an ongoing basis, but they also realize huge benefits in other areas such as hard and soft dollar savings, lower risk of data breach and a higher level in IT Security.

Activities to enable these benefits originates from your own organization; your governance, your policies & procedures, your processes.

How well is your organization performing within SAM? And how far away from your ideal state are you?

Assess your SAM/ITAM Maturity and Jump Start your ITAM program in two intensive days!

ITAMOrg offers a concentrated Software Asset Management service that will help qualify your SAM/ITAM goals, assess your current state and provide you with a clear and actionable report from which you can springboard your SAM/ITAM program.

This two-day SAM/ITAM Jump Start service is comprised of

an on-site engagement that analyses your SAM/ITAM strengths and weaknesses, aligns SAM/ITAM to your business and IT goals and provides clear guidance on areas of improvement and a future state for SAM/ITAM in your organization.

On day one we will analyze your existing SAM/ITAM processes with the help of the ITAMOrg SAM Process Maturity Assessment*. From this we will highlight which of those processes we recommend focusing on and which will provide most value to tackle first.

On day two we will run you through up to 15 pre-selected ITAM processes. The goal is to provide insight to "what good looks like" and discuss – in general terms, how these processes could or should work together.

Looking into the findings from the SAM/ITAM Maturity Assessment on day one, we then highlight and discuss where your short-term objectives sit and where you should put your focus to improve your processes.

Finally, you will receive a report that provides the basis for further activities and investments in bringing your organization to the next level and thus become more agile and risk-averse from an IT Asset perspective.

Processes (Operational)	Short	Medium	Long-Term	Suggested Process(es)
	0-3 months	3-9 months	9 months +
